

NAME

bibtexu – UTF-8 Big BibTeX

SYNOPSIS

bibtexu [*options*] *aux-file*

DESCRIPTION

BibTeXu is the Unicode-compliant version of BibTeX. It is largely based on Niel Kempson's BibTeX8, and it provides a better support for UTF-8 by integrating ICU library. Therefore, **BibTeXu** no longer requires the Codepage and Sort order ("CS") file; instead, the method of sorting and case-changing can be controlled via command-line options.

OPTIONS

-? **--help**

display some brief help text.

-d **--debug** *TYPE*

report debugging information. *TYPE* is one or more of all, csf, io, mem, misc, search.

-s **--statistics**

report internal statistics.

-t **--trace**

report execution tracing.

-v **--version**

report BibTeX version.

-l **--language** *LANG*

use language *LANG* to convert strings to low case. This argument is passed to ICU library.

-o **--location** *LANG*

use language *LANG* for sorting. This argument is passed to ICU library.

-B **--big**

set large BibTeX capacity.

-H **--huge**

set huge BibTeX capacity.

-W **--wolfgang**

set really huge BibTeX capacity for Wolfgang.

-M **--min_crossrefs** *##*

set min_crossrefs to *##*.

--mstrings *##*

allow *##* unique strings.

SEE ALSO

More detailed description of **BibTeXu** is available at \$TEXMFDIST/doc/bibtexu/README.

AUTHORS

BibTeXu was written by Yannis Haralambous and his students. This manpage was written for TeX Live.
