# 1 🍔 Introduction

**Emoji** (•: 絵文字) are pictographs (pictorial symbols) that are typically presented in a colorful cartoon form and used inline in text. They represent things such as faces, weather, vehicles and buildings, food and drink, animals and plants, or icons that represent emotions, feelings, or activities.<sup>[1]</sup>

In 2019, Luigi Scarso has integrated the HarfBuzz library into LuaTeX.<sup>1</sup> While the original purpose is to optimize the rendering of indic and arabic scripts, emoji is also supported by this new extended version of TeX at the same time.

The `emoji` package allows user to typeset emoji in a L<sup>A</sup>T<sub>E</sub>X document. It requires LuaHB<sup>A</sup>T<sub>E</sub>X: in TeX Live 2020, lualatex will base on this new engine; but in TeX Live 2019, only lualatex-dev can be used to compile.

Emoji has been included in the Unicode Standard since 2009. The `emoji` package support the latest version Emoji 13.0 (published on 2020-03-10).<sup>2</sup>

## 2 🔥 Basic usage

### 2.1 🚗 Load the package

The package should be loaded in the usual way:

```
\usepackage{emoji}
```

### 2.2 📋 Set emoji fonts

On Windows, macOS or Ubuntu system, the `emoji` package will automatically select available emoji fonts. If the package can't find any emoji fonts, or if you want to change the default font, you can use the following command to set emoji font manually.

---

```
\setemojifont \setemojifont{\font} [{\font features}]
```

This command is similar to `\setmainfont` provided by `fontspec`, but only works for emoji. The optional `{\font features}` should be a key-value list, which is described in the document of `fontspec` package in detail.

You can use this command in the preamble or in the document body. Only emoji afterwards will be affected.

Examples:

```
% Font name  
\setemojifont{Apple Color Emoji}  
  
% File name with explicit path  
\setemojifont{EmojiOneMozilla.ttf}[Path=./fonts/]
```

<sup>1</sup>Khaled Hosny has also created a similar project HarfTeX.

<sup>2</sup>Starting with version 11.0, the repertoire of emoji characters is synchronized with the Unicode Standard, and has the same version numbering system.

## 2.3 🎨 Use emoji

---

```
\emoji
```

This is the main command to use emoji. All valid *(name)* can be found in [subsection 3.1](#) (fullnames and aliases are both OK).

Examples:

```
\emoji{joy}  
\emoji{+1}  
\emoji{family-man-woman-girl-boy}  
\emoji{woman-and-man-holding-hands-light-skin-tone-medium-dark-skin-tone}
```

## 3 🔧 Technical details

### 3.1 📄 Emoji list

The emoji and their description are from Unicode's [emoji-test.txt](#), while the aliases are from GitHub's [emoji.json](#).

There are totally 3304 emoji listed here. This should equal to the number of fully-qualified emoji and components in Unicode standard.

In the following list, emoji is shown with Twemoji font. Note that not all emoji are supported in this font as present. The fullname is actually a sanitized version of description, which is from the CLDR short name. The version field Ex.x corresponds to the Emoji version when the emoji character or emoji sequence was first defined.

### 3.3 🚧 Known issues

The `emoji` package is highly experimental and may have a lot of bugs inevitably. For example:

- Spacing around emoji may be abnormal

- The emoji may not be copied from PDF

If you have any problems when using this package, please create an issue on GitHub or send an email to the author.

### 3.4 Todo list

The following features may be added in the future:

- Allow direct input of emoji
- Add options including default skin tones, genders, etc.
- Support more fonts
- Automatically fallback
