

Lemma's disambiguation

Abstract

This file provides an example of lemma's disambiguation.

All word which can potentially be twice (or more) in a same line is marked by an \sameword. *Eledmac* print the word rank only if the word is effectively printed twice (or more) time in the same line.

For use with \lemma, please read the handbook.

- 1 Leo aut ursus aut oryx aut ricinus aut equus aut lupus aut canis aut felix aut asinus
- 2 aut burricus.

1 aut⁶] et
2 aut] et

1 aut⁶] monotone...
