

Sectioning commands with critical notes in parallel columns

This file provides examples of using sectioning commands with reledpar. The section titles are in the line numbering, and have critical notes.

The left and right sides are put in columns. We use “eledsectnotoc–L to say we want the right titles be added to the table of contents, and not the left titles. We also use “eledsectmark–R to use the right side to add L^ET_EX marks for headers.

We use the “reledxxx commands, each of them in their own “pstart...“pend group.

Page clearings are manually added before chapter with “beforeeledchapter.

Chapter 1

¹ Left chapter

² I use git to manage some packages.
³ I would like to add a pre-commit hook,
⁴ to check if I have forgotten For now,
⁵ I have a minimal pre-commit, which
⁶ tests only the blank spaces at ends of
⁷ lines, but not the forgotten..
