

# makerobust package

Oberdiek Package Support Group

2019/11/12

Heiko Oberdiek's `makerobust` package defined a command with name `\MakeRobustCommand` that can be used to make fragile commands robust.

The L<sup>A</sup>T<sub>E</sub>X format has, since 2015, included a command `\MakeRobust` with the same syntax and behaviour. Also by 2019, almost all commands in L<sup>A</sup>T<sub>E</sub>X that may be used in a moving argument are already robust.

This package is now just a simple one line package defining the name `\MakeRobustCommand` as an alias for `\MakeRobust`, and should not be used in new documents.
