

**NAME**

**cefconv** – convert a TeX document containing CEF macros into ‘preprocessed’ form.

**SYNOPSIS**

**cefconv** < *infile* > *outfile*

**DESCRIPTION**

The **Chinese Encoding Framework (CEF)** developed by Christian Wittern <cwittern@conline.central.de> makes it possible to include CJK characters in various encodings using the SGML macros **&CX-aabb;** for Big 5 and CNS encoding and **&U-aabb;** for Unicode (X denotes a number between 0 and 7; 0 represents Big 5 encoding, 1-7 CNS encoding planes 1-7. **aabb** is either a decimal or hexadecimal number)

**cefconv** converts the CEF macros into a form which can directly processed with  $\text{\LaTeX} 2_{\varepsilon}$

This filter is part of the **CJK** macro package for  $\text{\LaTeX} 2_{\varepsilon}$
