

## Sectioning commands with critical notes in parallel pages

This file provides examples for using the sectioning command with reledpar. The section titles are in the line numbering, and have critical notes.

The left and right sides are put in parallel pages. Following the standard behavior of reledpar, only the left titles are put to the table of contents.

We use the “reledxxx commands, each of them in their own “pstart...“pend group.

Page breaks are manually added before chapter with “beforeeledchapter.
