ABSTRACT

A clear and well-documented L^AT_EX document is presented as an article formatted for publication by ACM in a conference proceedings or journal publication. Based on the “acmart” document class, this article presents and explains many of the common variations, as well as many of the formatting elements an author may use in the preparation of the documentation of their work.

CCS CONCEPTS

- Computer systems organization → Embedded systems; Redundancy; Robotics;
- Networks → Network reliability.

*Both authors contributed equally to this research.

50 Permission to make digital or hard copies of all or part of this work for personal or
51 Unpublished working draft. Not for distribution. Contributed
52 for profit or commercial advantage and that copies bear this notice and the full citation
53 on the first page. Copyrights for components of this work owned by others than ACM
54 must be honored. Abstracting with credit is permitted. To copy otherwise, or republish,
55 to post on servers or to redistribute to lists, requires prior specific permission and/or a
56 fee. Request permissions from permissions@acm.org.

ACM Reference Format:

Ben Trovato, G.K.M. Tobin, Lars Thørväld, Valerie Béranger, Aparna Patel, Huifen Chan, Charles Palmer, John Smith, and Julius P. Kumquat. 2018. The Name of the Title is Hope. In *Woodstock '18: ACM Symposium on Neural Gaze Detection, June 03–05, 2018, Woodstock, NY*. ACM, New York, NY, USA, 6 pages. <https://doi.org/10.1145/1122445.1122456>

1 INTRODUCTION

ACM’s consolidated article template, introduced in 2017, provides a consistent L^AT_EX style for use across ACM publications, and incorporates accessibility and metadata-extraction functionality necessary for future Digital Library endeavors. Numerous ACM and SIG-specific L^AT_EX templates have been examined, and their unique features incorporated into this single new template.

If you are new to publishing with ACM, this document is a valuable guide to the process of preparing your work for publication. If you have published with ACM before, this document provides insight and instruction into more recent changes to the article template.

117 The “acmart” document class can be used to prepare articles for
 118 any ACM publication — conference or journal, and for any stage
 119 of publication, from review to final “camera-ready” copy, to the
 120 author’s own version, with *very few changes to the source*.
 121

122 2 TEMPLATE OVERVIEW

123 As noted in the introduction, the “acmart” document class can
 124 be used to prepare many different kinds of documentation — a
 125 double-blind initial submission of a full-length technical paper, a
 126 two-page SIGGRAPH Emerging Technologies abstract, a “camera-
 127 ready” journal article, a SIGCHI Extended Abstract, and more — all
 128 by selecting the appropriate *template style* and *template parameters*.
 129

130 This document will explain the major features of the document
 131 class. For further information, the *L^AT_EX User’s Guide* is available
 132 from <https://www.acm.org/publications/proceedings-template>.

133 2.1 Template Styles

134 The primary parameter given to the “acmart” document class is the
 135 *template style* which corresponds to the kind of publication or SIG
 136 publishing the work. This parameter is enclosed in square brackets
 137 and is a part of the *documentclass* command:
 138

```
139 \documentclass[STYLE]{acmart}
```

140 Journals use one of three template styles. All but three ACM
 141 journals use the acmsmall template style:
 142

- acmsmall: The default journal template style.
- acmlarge: Used by JOCH and TAP.
- acmtog: Used by TOG.

143 The majority of conference proceedings documentation will use
 144 the acmconf template style.
 145

- acmconf: The default proceedings template style.
- sigchi: Used for SIGCHI conference articles.
- sigchi-a: Used for SIGCHI “Extended Abstract” articles.
- sigplan: Used for SIGPLAN conference articles.

155 2.2 Template Parameters

156 In addition to specifying the *template style* to be used in formatting
 157 your work, there are a number of *template parameters* which modify
 158 some part of the applied template style. A complete list of these
 159 parameters can be found in the *L^AT_EX User’s Guide*.
 160

161 Frequently-used parameters, or combinations of parameters, in-
 162 clude:

- anonymous, review: Suitable for a “double-blind” conference
 163 submission. Anonymizes the work and includes line num-
 164 bers. Use with the \acmSubmissionID command to print the
 165 submission’s unique ID on each page of the work.
- authorversion: Produces a version of the work suitable for
 166 posting by the author.
- screen: Produces colored hyperlinks.

167 This document uses the following string as the first command
 168 in the source file:

```
169 \documentclass[sigconf,authordraft]{acmart}
```

175 3 MODIFICATIONS

176 Modifying the template — including but not limited to: adjusting
 177 margins, typeface sizes, line spacing, paragraph and list definitions,
 178 and the use of the \vspace command to manually adjust the vertical
 179 spacing between elements of your work — is not allowed.

180 **Your document will be returned to you for revision if mod-
 181 ifications are discovered.**

183 4 TYPEFACES

184 The “acmart” document class requires the use of the “Libertine”
 185 typeface family. Your Te_X installation should include this set of
 186 packages. Please do not substitute other typefaces. The “lmodern”
 187 and “ltimes” packages should not be used, as they will override
 188 the built-in typeface families.

190 5 TITLE INFORMATION

191 The title of your work should use capital letters appropriately -
 192 <https://capitalizemytitle.com/> has useful rules for capitalization.
 193 Use the *title* command to define the title of your work. If your
 194 work has a subtitle, define it with the *subtitle* command. Do not
 195 insert line breaks in your title.

196 If your title is lengthy, you must define a short version to be
 197 used in the page headers, to prevent overlapping text. The *title*
 198 command has a “short title” parameter:

```
199 \title[short title]{full title}
```

201 6 AUTHORS AND AFFILIATIONS

202 Each author must be defined separately for accurate metadata identi-
 203 fication. Multiple authors may share one affiliation. Authors’ names
 204 should not be abbreviated; use full first names wherever possible.
 205 Include authors’ e-mail addresses whenever possible.

206 Grouping authors’ names or e-mail addresses, or providing an
 207 “e-mail alias,” as shown below, is not acceptable:

```
208 \author{Brooke Aster, David Mehldau}  

  209 \email{dave,judy,steve@university.edu}  

  210 \email{firstname.lastname@phillips.org}
```

211 The authornote and authortotemark commands allow a note
 212 to apply to multiple authors — for example, if the first two authors
 213 of an article contributed equally to the work.

214 If your author list is lengthy, you must define a shortened version
 215 of the list of authors to be used in the page headers, to prevent
 216 overlapping text. The following command should be placed just
 217 after the last \author{} definition:

```
218 \renewcommand{\shortauthors}{McCartney, et al.}
```

219 Omitting this command will force the use of a concatenated list of
 220 all of the authors’ names, which may result in overlapping text in
 221 the page headers.

222 The article template’s documentation, available at <https://www.acm.org/publications/proceedings-template>, has a complete expla-
 223 nation of these commands and tips for their effective use.

224 Note that authors’ addresses are mandatory for journal articles.

233 7 RIGHTS INFORMATION

234 Authors of any work published by ACM will need to complete a
 235 rights form. Depending on the kind of work, and the rights man-
 236 agement choice made by the author, this may be copyright transfer,
 237 permission, license, or an OA (open access) agreement.

238 Regardless of the rights management choice, the author will
 239 receive a copy of the completed rights form once it has been sub-
 240 mitted. This form contains \LaTeX commands that must be copied
 241 into the source document. When the document source is compiled,
 242 these commands and their parameters add formatted text to several
 243 areas of the final document:

- 244 • the “ACM Reference Format” text on the first page.
- 245 • the “rights management” text on the first page.
- 246 • the conference information in the page header(s).

247 Rights information is unique to the work; if you are preparing
 248 several works for an event, make sure to use the correct set of
 249 commands with each of the works.

250 The ACM Reference Format text is required for all articles over
 251 one page in length, and is optional for one-page articles (abstracts).

255 8 CCS CONCEPTS AND USER-DEFINED 256 KEYWORDS

257 Two elements of the “acmart” document class provide powerful
 258 taxonomic tools for you to help readers find your work in an online
 259 search.

260 The ACM Computing Classification System – <https://www.acm.org/publications/class-2012> – is a set of classifiers and concepts
 261 that describe the computing discipline. Authors can select entries
 262 from this classification system, via <https://dl.acm.org/ccs/ccs.cfm>,
 263 and generate the commands to be included in the \LaTeX source.

264 User-defined keywords are a comma-separated list of words and
 265 phrases of the authors’ choosing, providing a more flexible way of
 266 describing the research being presented.

267 CCS concepts and user-defined keywords are required for for
 268 all articles over two pages in length, and are optional for one- and
 269 two-page articles (or abstracts).

273 9 SECTIONING COMMANDS

274 Your work should use standard \LaTeX sectioning commands: `section`,
 275 `subsection`, `subsubsection`, and `paragraph`. They should be num-
 276 bered; do not remove the numbering from the commands.

277 Simulating a sectioning command by setting the first word or
 278 words of a paragraph in boldface or italicized text is **not allowed**.

281 10 TABLES

282 The “acmart” document class includes the “booktabs” package –
 283 <https://ctan.org/pkg/booktabs> – for preparing high-quality tables.

284 Table captions are placed *above* the table.

285 Because tables cannot be split across pages, the best placement
 286 for them is typically the top of the page nearest their initial cite.
 287 To ensure this proper “floating” placement of tables, use the envi-
 288 ronment `table` to enclose the table’s contents and the table caption.
 289 The contents of the table itself must go in the `tabular` environment,

291 **Table 1: Frequency of Special Characters**

292 Non-English or Math	293 Frequency	294 Comments
295 \emptyset	296 1 in 1,000	297 For Swedish names
298 π	299 1 in 5	300 Common in math
301 $$$	302 4 in 5	303 Used in business
304 Ψ_1^2	305 1 in 40,000	306 Unexplained usage

307 to be aligned properly in rows and columns, with the desired hori-
 308 zontal and vertical rules. Again, detailed instructions on `tabular`
 309 material are found in the *\LaTeX User’s Guide*.

310 Immediately following this sentence is the point at which Table 1
 311 is included in the input file; compare the placement of the table
 312 here with the table in the printed output of this document.

313 To set a wider table, which takes up the whole width of the page’s
 314 live area, use the environment `table*` to enclose the table’s contents
 315 and the table caption. As with a single-column table, this wide
 316 table will “float” to a location deemed more desirable. Immediately
 317 following this sentence is the point at which Table 2 is included in
 318 the input file; again, it is instructive to compare the placement of
 319 the table here with the table in the printed output of this document.

315 11 MATH EQUATIONS

316 You may want to display math equations in three distinct styles:
 317 inline, numbered or non-numbered display. Each of the three are
 318 discussed in the next sections.

320 11.1 Inline (In-text) Equations

321 A formula that appears in the running text is called an inline or
 322 in-text formula. It is produced by the `math` environment, which
 323 can be invoked with the usual `\begin{math} \dots \end{math}` construction or
 324 with the short form `$ \dots $`. You can use any of the symbols and
 325 structures, from α to ω , available in \LaTeX [23]; this section will
 326 simply show a few examples of in-text equations in context. Notice
 327 how this equation: $\lim_{n \rightarrow \infty} x = 0$, set here in in-line math style,
 328 looks slightly different when set in display style. (See next section).

330 11.2 Display Equations

331 A numbered display equation—one set off by vertical space from
 332 the text and centered horizontally—is produced by the `equation`
 333 environment. An unnumbered display equation is produced by the
 334 `displaymath` environment.

335 Again, in either environment, you can use any of the symbols
 336 and structures available in \LaTeX ; this section will just give a couple
 337 of examples of display equations in context. First, consider the
 338 equation, shown as an inline equation above:

$$\lim_{n \rightarrow \infty} x = 0 \quad (1)$$

340 Notice how it is formatted somewhat differently in the `display-`
 341 `math` environment. Now, we’ll enter an unnumbered equation:

$$\sum_{i=0}^{\infty} x + 1$$

349

350

351

352

353

354

355

356

357

and follow it with another numbered equation:

$$\sum_{i=0}^{\infty} x_i = \int_0^{\pi+2} f \quad (2)$$

just to demonstrate \LaTeX 's able handling of numbering.

363

12 FIGURES

The “figure” environment should be used for figures. One or more images can be placed within a figure. If your figure contains third-party material, you must clearly identify it as such, as shown in the example below.

Figure 2: 1907 Franklin Model D roadster. Photograph by Harris & Ewing, Inc. [Public domain], via Wikimedia Commons. (<https://goo.gl/VLCRBB>).

Your figures should contain a caption which describes the figure to the reader. Figure captions go below the figure. Your figures should also include a description suitable for screen readers, to assist the visually-challenged to better understand your work.

Figure captions are placed *below* the figure.

393

12.1 The “Teaser Figure”

A “teaser figure” is an image, or set of images in one figure, that are placed after all author and affiliation information, and before the body of the article, spanning the page. If you wish to have such a figure in your article, place the command immediately before the `\maketitle` command:

Table 2: Some Typical Commands

Command	A Number	Comments
<code>\author</code>	100	Author
<code>\table</code>	300	For tables
<code>\table*</code>	400	For wider tables

406

```
\begin{teaserfigure}
\includegraphics[width=\textwidth]{sampleteaser}
\caption{figure caption}
\Description{figure description}
\end{teaserfigure}
```

13 CITATIONS AND BIBLIOGRAPHIES

The use of \TeX for the preparation and formatting of one's references is strongly recommended. Authors' names should be complete — use full first names (“Donald E. Knuth”) not initials (“D. E. Knuth”) — and the salient identifying features of a reference should be included: title, year, volume, number, pages, article DOI, etc.

The bibliography is included in your source document with these two commands, placed just before the `\end{document}` command:

```
\bibliographystyle{ACM-Reference-Format}
\bibliography{bibfile}
```

where “`bibfile`” is the name, without the “`.bib`” suffix, of the \TeX file.

Citations and references are numbered by default. A small number of ACM publications have citations and references formatted in the “author year” style; for these exceptions, please include this command in the **preamble** (before the command “`\begin{document}`”) of your \LaTeX source:

```
\citestyle{acmauthoryear}
```

Some examples. A paginated journal article [2], an enumerated journal article [10], a reference to an entire issue [9], a monograph (whole book) [22], a monograph/whole book in a series (see 2a in spec. document) [16], a divisible-book such as an anthology or compilation [12] followed by the same example, however we only output the series if the volume number is given [13] (so Editor00a's series should NOT be present since it has no vol. no.), a chapter in a divisible book [34], a chapter in a divisible book in a series [11], a multi-volume work as book [21], an article in a proceedings (of a conference, symposium, workshop for example) (paginated proceedings article) [3], a proceedings article with all possible elements [33], an example of an enumerated proceedings article [14], an informally published work [15], a couple of preprints [6, 7], a doctoral dissertation [8], a master's thesis: [4], an online document / world wide web resource [1, 27, 35], a video game (Case 1) [26] and (Case 2) [25] and [24] and (Case 3) a patent [32], work accepted for publication [29], 'YYYYb'-test for prolific author [30] and [31]. Other cites might contain 'duplicate' DOI and URLs (some SIAM articles) [20]. Boris / Barbara Beeton: multi-volume works as books [18] and [17]. A couple of citations with DOIs: [19, 20]. Online citations: [35–37]. Artifacts: [28] and [5].

465 14 ACKNOWLEDGMENTS

466 Identification of funding sources and other support, and thanks
 467 to individuals and groups that assisted in the research and the
 468 preparation of the work should be included in an acknowledgment
 469 section, which is placed just before the reference section in your
 470 document.

471 This section has a special environment:

```
472 \begin{acks}
 473 ...
 474 \end{acks}
```

475 so that the information contained therein can be more easily col-
 476 lected during the article metadata extraction phase, and to ensure
 477 consistency in the spelling of the section heading.

478 Authors should not prepare this section as a numbered or un-
 479 numbered \section; please use the “acks” environment.

480 15 APPENDICES

481 If your work needs an appendix, add it before the “\end{document}”
 482 command at the conclusion of your source document.

483 Start the appendix with the “appendix” command:

```
484 \appendix
```

485 and note that in the appendix, sections are lettered, not numbered.
 486 This document has two appendices, demonstrating the section and
 487 subsection identification method.

488 16 SIGCHI EXTENDED ABSTRACTS

489 The “sigchi-a” template style (available only in L^AT_EX and not in
 490 Word) produces a landscape-orientation formatted article, with a
 491 wide left margin. Three environments are available for use with
 492 the “sigchi-a” template style, and produce formatted output in
 493 the margin:

- sidebar: Place formatted text in the margin.
- marginfigure: Place a figure in the margin.
- margintable: Place a table in the margin.

502 ACKNOWLEDGMENTS

503 To Robert, for the bagels and explaining CMYK and color spaces.

A RESEARCH METHODS

A.1 Part One

589 Lorem ipsum dolor sit amet, consectetur adipiscing elit. Morbi
590 malesuada, quam in pulvinar varius, metus nunc fermentum urna,
591 id sollicitudin purus odio sit amet enim. Aliquam ullamcorper eu
592 ipsum vel mollis. Curabitur quis dictum nisl. Phasellus vel semper
593 risus, et lacinia dolor. Integer ultricies commodo sem nec semper.
594

A.2 Part Two

595 Etiam commodo feugiat nisl pulvinar pellentesque. Etiam auctor
596 sodales ligula, non varius nibh pulvinar semper. Suspendisse nec
597 lectus non ipsum convallis congue hendrerit vitae sapien. Donec
598 at laoreet eros. Vivamus non purus placerat, scelerisque diam eu,
599 cursus ante. Etiam aliquam tortor auctor efficitur mattis.

B ONLINE RESOURCES

600 Nam id fermentum dui. Suspendisse sagittis tortor a nulla mollis,
601 in pulvinar ex pretium. Sed interdum orci quis metus euismod, et
602 sagittis enim maximus. Vestibulum gravida massa ut felis suscipit
603 congue. Quisque mattis elit a risus ultrices commodo venenatis eget
604 dui. Etiam sagittis eleifend elementum.

605 Nam interdum magna at lectus dignissim, ac dignissim lorem
606 rhoncus. Maecenas eu arcu ac neque placerat aliquam. Nunc pulv-
607 inar massa et mattis lacinia.
